

Theme: Building with LLMs

# Generative AI Tanzania

By Kalebu Gwalugano

Why this community ?

Build capacity of people  
who are **builders** and not  
just consumers of  
Generative AI

A safe place for **AI**  
enthusiasts to share and  
network together

# Generative AI Tanzania

---

Our community has now about 111 members on  
WhatsApp group

<https://bit.ly/44XpwKN>

# We are just getting started

**1st**

Theme: Workshop on Prompt  
Engineering

**2nd**

Theme: Anything generative AI

**3rd**

Theme: Building with LLMs

**Any Question up  
to here?**

# LLMs?

---

Large language models (LLMs) are deep learning algorithms that can recognize, summarize, translate, predict, and generate content using **very large datasets**.

**Llama-2**

2 trillions tokens

**Falcon**

3.5-trillion tokens

**GPT-3**

570 gigabytes of text

**Tokens ?  
How does  
they work ?**

**Trust me you will get it**

**Life before LLMS ?**

# Traditional NLP vs LLMs

Traditional Natural language processing  
is focused on understanding language  
by it's *individual components*

LLMs try to understand the language  
as a *whole*

# Traditional NLP

Part of Speech  
tagging (POS)

Lemmatization

Dependency  
parsing

Stemming

Stopwords  
Analysis

# How do **LLMs** learn?

I'm learning a new \_\_\_\_\_ language for building AI systems

# LLM emergent behaviors

As Language Models grow, novel abilities suddenly appear [8]

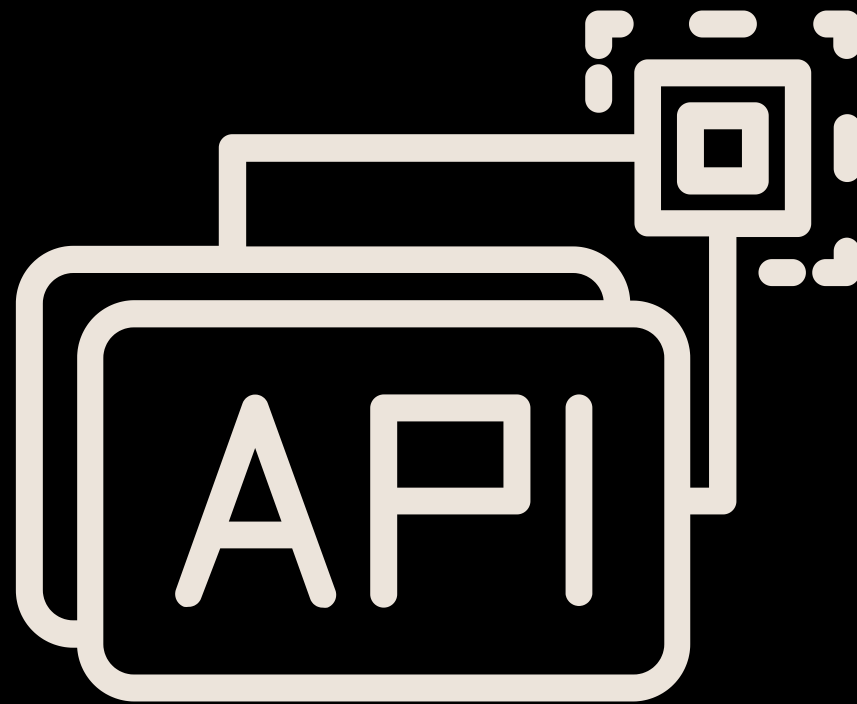

# What can you do with LLMS ?

- Semantic Search
- Chatbots Application
- AI assistants
- Automate workflows
- So much more

*The limit is your own imagination*

# Good, Now how can I get started?

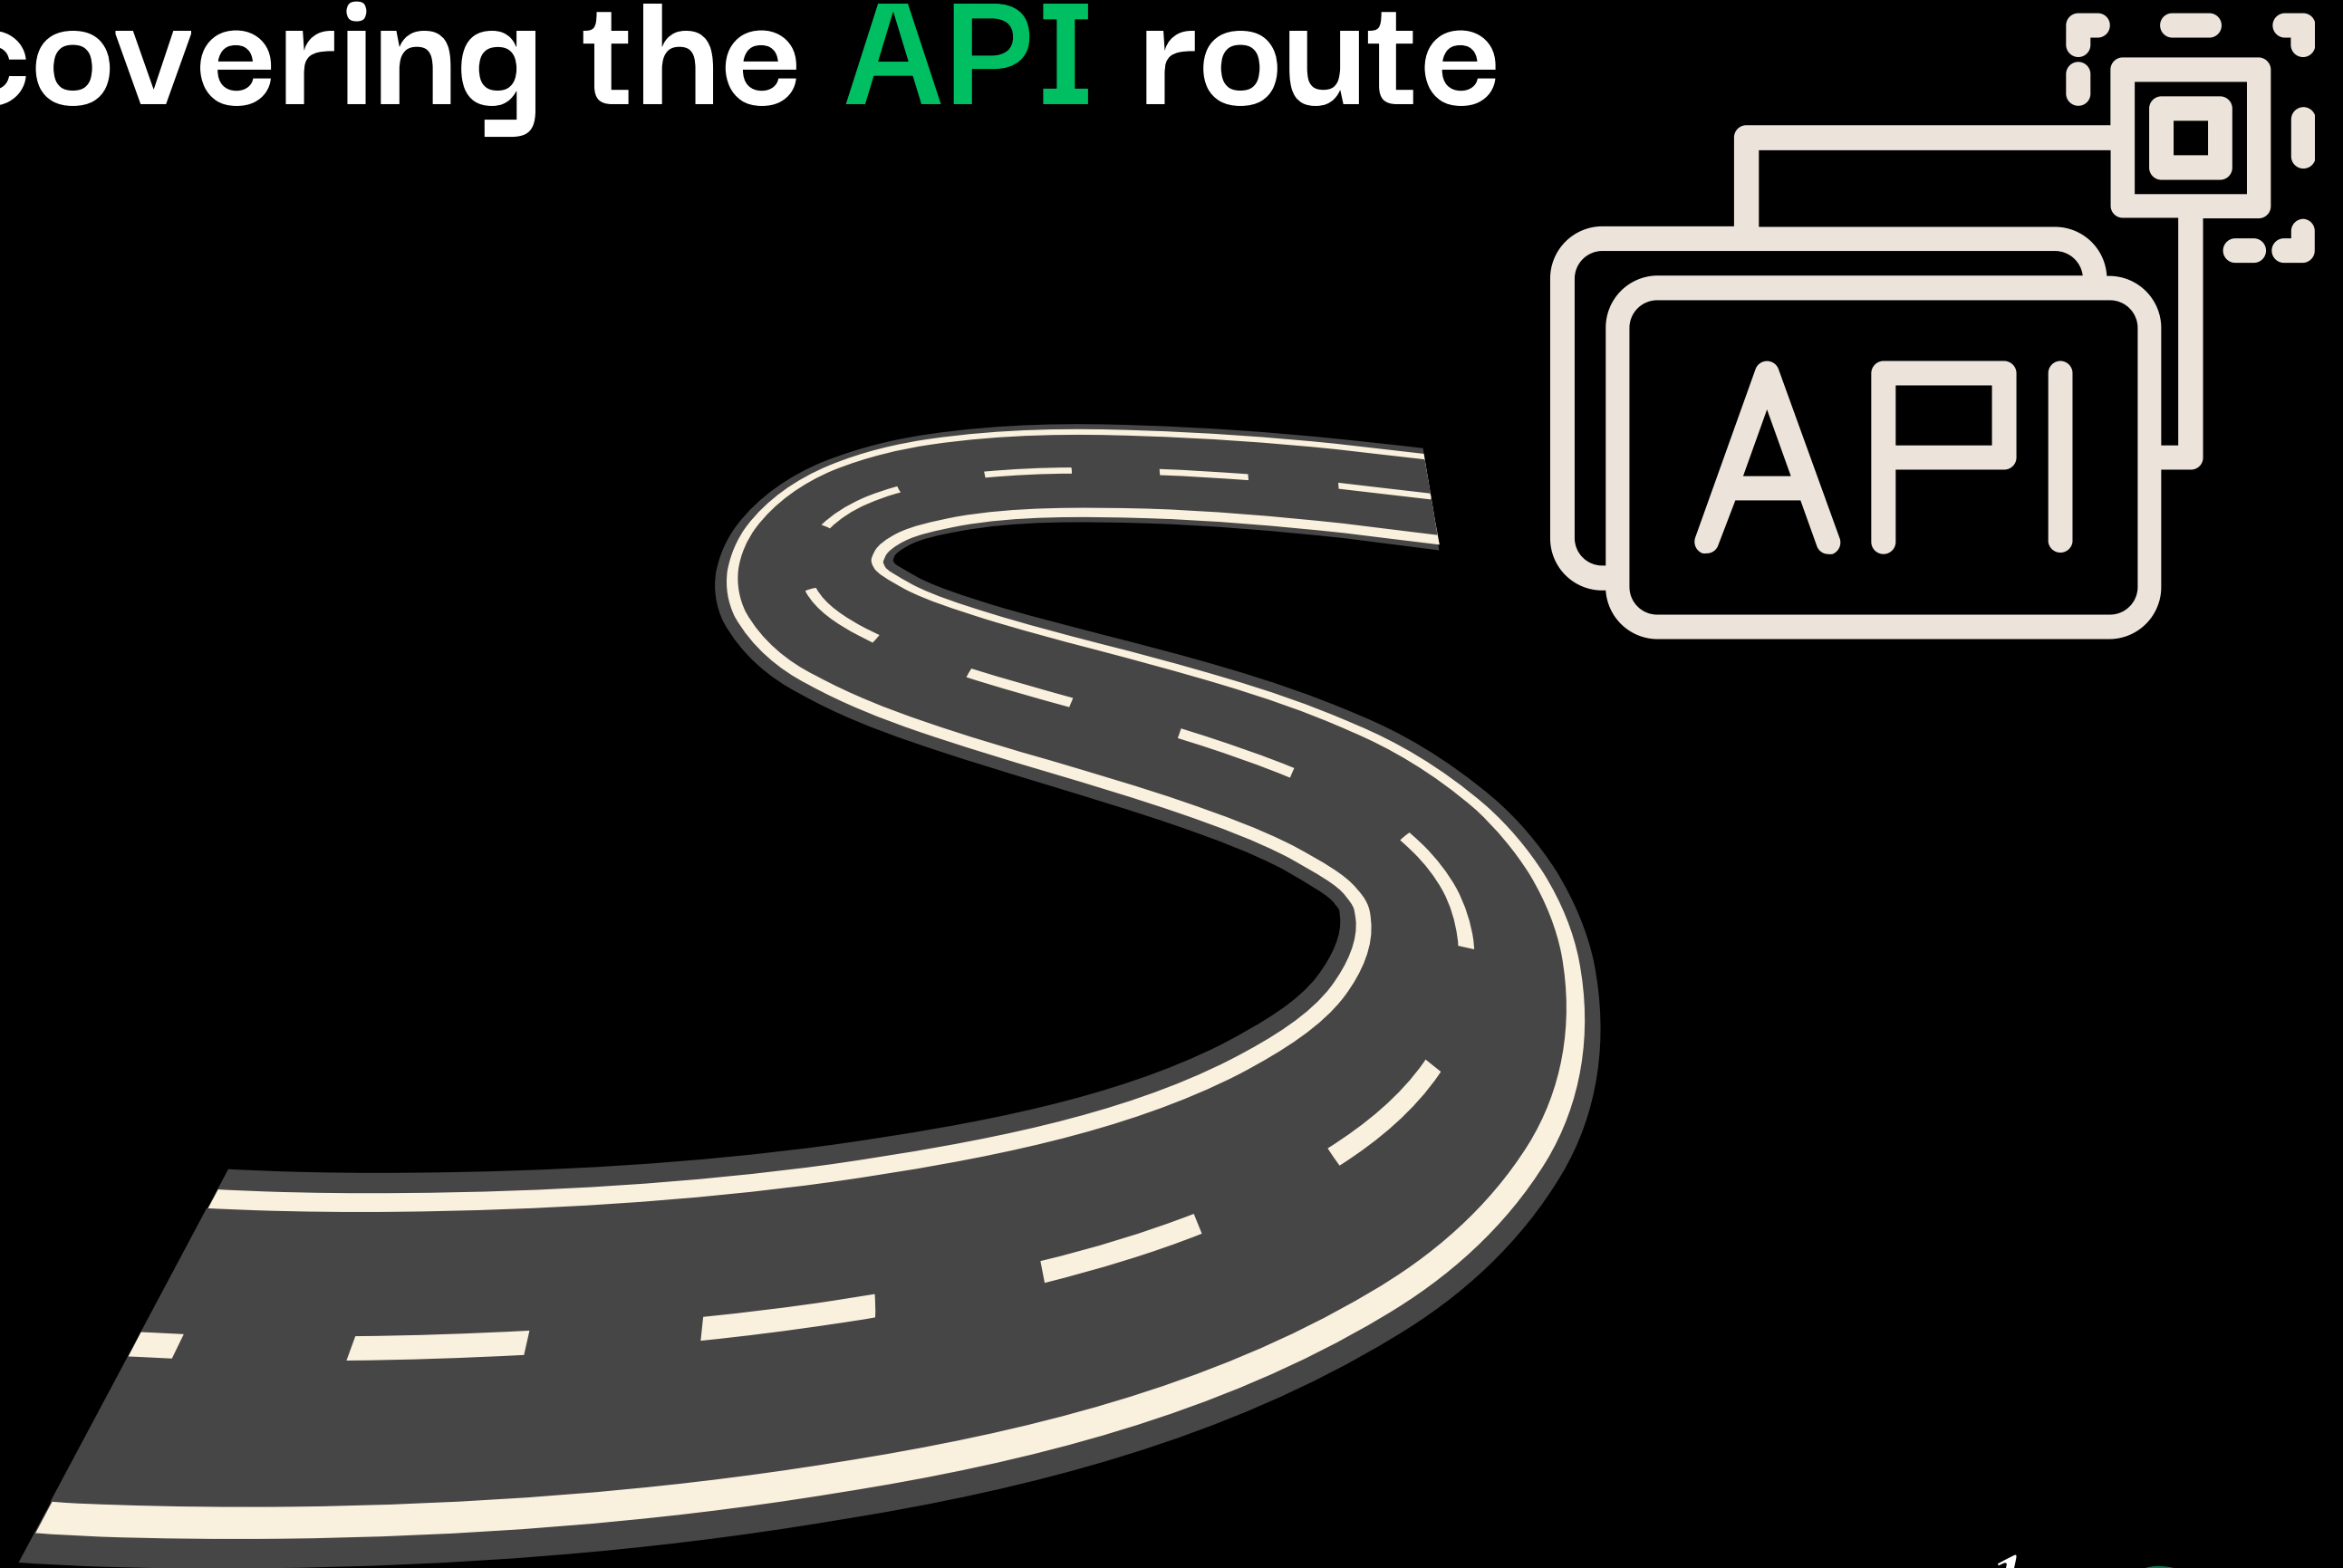

Use API from LLM provider like  
OpenAI, Cohere, Google,  
Anthropic and so on

You can either run load the entire  
models

I will be covering the **API** route

*Mainly OpenAI*

Everyone will have their private AI node that is free from third parties,  
constantly feeding your data from a variety of angles

# Terminologies

Survey Response

---

**What do these tools  
actually do?**

**Think of them as web frameworks but for AI applications, They are architected in a way that simplifies adding complex features like memory, external knowledge bases and so on**

**If your use case is too simple, you might not need them at all**

# We are going to use Python

You should be able to easily replicate across other languages

On a scale of 1 to 10, how would you rate your proficiency in Python?
